

Get on the path to dramatically lower LDL (bad cholesterol) with Repatha[®]

HeFH is one of the most common inherited conditions. It causes high levels of LDL at an early age. In adults, it can cause LDL-C levels to be around twice as high as normal (e.g. >190 mg/dL). Inherited high LDL comes from abnormal genes that affect the liver's ability to remove LDL from the blood. If you have HeFH and can't seem to lower your bad cholesterol with statin therapy along with diet, Repatha[®] can help.

For more detailed information on HeFH and Repatha[®], visit FHInherited.com

What is Repatha[®]?

Repatha[®] is an injectable prescription medicine. Repatha[®] is used in adults with cardiovascular disease to reduce the risk of heart attack, stroke and certain types of heart surgery. Repatha[®] is also used along with diet alone or together with other cholesterol-lowering medicines in adults with high blood cholesterol levels called primary hyperlipidemia (including a type of high cholesterol called heterozygous familial hypercholesterolemia) to reduce low density lipoprotein (LDL) or bad cholesterol.

Taken every 2 weeks or
once monthly, Repatha[®] + a statin
lowered LDL about
60%

For people with
heart disease,
Repatha[®] is FDA-approved
to reduce the risk of heart
attack and stroke.

Repatha[®] drives LDL down in people with HeFH

Repatha[®] works differently than a statin

Statins help prevent the liver from making as much cholesterol, including LDL. But if you have HeFH, sometimes statins with or without other cholesterol-lowering therapies aren't enough.

Repatha[®] works differently than statins by targeting a specific enzyme in the body called PCSK9. By limiting its actions, Repatha[®] can help your liver clear LDL from your blood.

Talk with your doctor. Find out if Repatha[®] is right for you.

Important Safety Information

Do not use Repatha[®] if you are allergic to evolocumab or to any of the ingredients in Repatha[®].

Please see additional **Important Safety Information** on the back page.

Two ways to take Repatha®

Choose the option that's right for you

Once every two weeks

Repatha® SureClick® is a single-use autoinjector* that allows you to self-inject

Once a month

Call **1-844-REPATHA (1-844-737-2842)** 7 days a week, 9 AM-11 PM ET, for more information.

Important Safety Information

Do not use Repatha® if you are allergic to evolocumab or to any of the ingredients in Repatha®.

Before you start using Repatha®, tell your healthcare provider about all your medical conditions, including if you are allergic to rubber or latex, are pregnant or plan to become pregnant, or are breastfeeding or plan to breastfeed. The needle covers on the single-use prefilled syringes and the inside of the needle caps on the single-use prefilled SureClick® autoinjectors contain dry natural rubber. The single-use Pushtonex® system (on-body infusor with prefilled cartridge) is not made with natural rubber latex.

Tell your healthcare provider or pharmacist about any prescription and over-the-counter medicines, vitamins, or herbal supplements you take.

What are the possible side effects of Repatha®?

Repatha® can cause serious side effects including: Repatha® may cause allergic reactions that can be serious. Call your healthcare provider or go to the nearest hospital emergency room right away if

you have any symptoms of an allergic reaction including a severe rash, redness, severe itching, a swollen face, or trouble breathing.

The most common side effects of Repatha® include: runny nose, sore throat, symptoms of the common cold, flu or flu-like symptoms, back pain, high blood sugar levels (diabetes) and redness, pain, or bruising at the injection site.

Tell your healthcare provider if you have any side effect that bothers you or that does not go away.

These are not all the possible side effects of Repatha®. Ask your healthcare provider or pharmacist for more information. Call your healthcare provider for medical advice about side effects.

You are encouraged to report negative side effects of prescription drugs to the FDA. Visit www.fda.gov/medwatch, or call 1-800-FDA-1088.
